Hi

Please try the following link to Jim Eshelman's web page – left hand column (8E)

Hi. I started having some kind of problem with my PC that I do not really understand.

On two occasions (when I was using MSN Messenger with video conference), I got the blue screen that says Windows has detected a problem and is shutting down to prevent damage. The error message is as follows:

Stop:0x000000008E ((0xC0000005, 0xF09825C8, 0xEF68A810, 0x00000000)).

\* tcpip.sys – address F09825C8 base at F097F000, Date stamp 43C7103C

I have run a virus check and nothing shows. I have not installed any programs. The only installation done was the regularly Windows updates. I would appreciate any help. Thanks, RReis
