Go to your Screensaver tab in Display Properties and remove the check next to "on resume, display Welcome Screen".

| I have a laptop running XP Home and once the laptop goes into hibernation or standby mode, I am required to log back in before I can continue using my laptop. This is the blue start up screen and it says I to click on my user name to begin. I am not required to enter a password, just simply click on my user name and then windows starts up for me.
|
| I never used to be required to use this log in type of startup. How can I skip this step and have the laptop pick up just where I left off prior to the hibernation ...without the need to click on my user name?
