On Saturday 03 June 2006 08:45 am, brunetto had this to say in microsoft.public.windowsxp.general:

I ran the XP CD.
I clicked on ' Check system compatibility.'
Then I clicked ' Check my system automatically.'
Before the process could finish, I got the error:
" Setup information file D:\i386\COMPDATA\NTCOMPAT.INF is invalid. Contact your system administrator."
Please advise
Thank you

Isn't this toy operating system so helpful? Didn't you contact your "system administrator" like Windoze suggested? Don't have a "system administrator"? Well, you can always hire one.
