There may be several reasons behind this problem. Check it here:–

'Program too big to fit into memory'

Hello Friends,

I used to keep all the Installers (Exe, Zip etc.) in a folder (Folder name:– D:\Installers\ ) for future use. Recently I burned with my Nero 6.3 to a cd and later found various icon pictures disappeared from all the exes' in the cd and when I tried to open displays "Program too big to fit in memory" in a dos window.

The files in the `Installers' folder on my hard disk were readable but I forgot to take another backup.

Yesterday after re-formatting the C: drive with WinXP Pro Sp2 when I tried to install other softwares from the D:\Installers folder the same thing had happened to the files. Icon pictures disappeared and gets prompt "Program too big to fit in memory". I had not touched the D:\Installers folder at all and don't know how this happened.

Somebody please help as I am in real big trouble. Your kindest honest response will be appreciated.
