Brendan wrote:

Currently running xp sp1 and trying to run mdac\_typ.exe /q to accomplish a silent install of mdac 2.8. I always get prompted with the EULA, is there anyway to avoid the EULA dialog box? I have also tried with the switches mdac\_typ.exe /q:a but still get EULA.

Related question, are newer versions of MDAC fairly backwards compatible? We are looking at updating 19,000 workstations and are planning on lots of testing. Just wanted to know how much trouble we might be in for.
