I resized the partitions using Acronis Partition Manager. The purpose was to have more space. After resize partitions have new size but windows fails to recognize this. I tried checkdisk and nothing. I'm trying defragment now despite the fact that it needs 15% free space.

DL a scris:

Resized the partitions, how?
You need a third party utility to resize a working system.
As it is your C drive has no free space and your sys will be unstable.

Hello!

Why is this happening and how can I fit it?

<http://img226.imageshack.us/img226/6710/lessspace4hz.jpg>

Applications fail to install because C: has no free space although I resized the partitions.

Please someone help.

TIA
