How do I reconnect my computers main identity, once it has been accidentally disconnected? I have several users set up with 2 system administrators and someone who remains anonymous disconnected the main identity. Now I can't get back to make system changes. Any help on this will be greatly appreciated.

I don't know what you mean by "disconnected the main identity". If you mean that someone disabled the built-in Administrator account:

If you have disabled the built-in Administrator account, booting into Safe Mode will automatically enable it again (temporarily, for that Safe Mode session).

Boot into Safe Mode (tap F8 repeatedly as the computer is starting). If no user logon appears in Safe Mode where you can type in the user account name "Administrator" (or click on it), press Ctrl+Alt+Del twice.

If this isn't what you mean, then please post back *after* reading the information at this link which will tell you what details to include in your next post:
