I had to get a new pair of glasses last week to see things properly. Here is what I found:

Right-click the task / Properties / "Schedule" tab / locate the drop box called "Schedule Task" / select "At System Startup".

I didn't see it on there under the "schedule" tab or in its advanced settings

under that tab. Im running XP SP2. Thanks for helping though.

No, I was referring to the "Schedule" tab of the Task Manager where you can tick when exactly the task should run.

If you mean the "Run only if logged in" option i have those disabled

but

the

program doesn't come up in front of the log in screen is it running in

Re: Restart and Logon with Scheduled task

the

background?

I have my computer set up  
with scheduled task to:

- restart every day at 6 AM
- run disk clean up mondays  
at 3 AM
- run disk defrag on tues. at  
3 AM
- run anti-spy ware software  
wed. at 3 AM
- run avast anti-virus thurs.  
at 3 AM

I removed the requirement  
to have a password to run  
these task

because

i

dont like to have to log on to  
my home computer. Also if  
im not

here

to

logon

tuesday after an everyday  
scheduled reboot my  
computer can still

be

logged

Re: Restart and Logon with Scheduled task

on

to run the disk defrag.

I want to have this same  
setup on my laptop but i  
need to have a

password

on

it for login so my question  
is:

Is there a way i can schedule  
a task to restart and logon to  
my

user

account

or a scheduled task that logs  
on then runs a program?

You can schedule your tasks to run at  
boot-up time instead  
of logon time.
