Wesley

I gave it try earlier today and it didnt seem to work. I cant figure it out. As I mentioned, I simply turned on prompting for intranet zone on a windows 2000 machine and it worked fine but on XP pro the setting seems to have no effect.

Security Alert

Your current security settings prohibit copying or moving files from this zone.

First you have to Enable the My Computer Security Zone in Internet Options.

How to Enable the My Computer Security Zone in Internet Options

<http://support.microsoft.com/?kbid=315933>

2. Disable the Drag and drop or copy and paste files option in the Internet and local intranet zone. To do this, follow these steps:

- In Internet Explorer, click Internet Options on the Tools menu, and then click the Security tab.
- In the Select a Web content zone to specify its security settings box, click Internet, and then click Custom Level.
- In the Settings box, locate the Drag and drop or copy and paste files option under Miscellaneous. Make a note of your current setting.
- Under Drag and drop or copy and paste files, click Disable, and then click OK.
- Click Yes, and then click OK two times.
- Repeat these steps for the local intranet zone by clicking Local intranet instead of Internet in step 2b.

Re: drag and drop prompting

If XP Pro...

1. Click Start, click Run, type mmc, and then click OK.
2. On the Action menu, click Add/Remove Snap-ins.
3. Click Add, click Group Policy, click Add, click Group Policy or Local Policy, and then click Finish.
4. Click Close, and then click OK.
5. Expand User Configuration, and then expand Windows Settings.
6. Under Windows Settings, expand Internet Explorer Maintenance, and then click the Security object.
7. In the right pane of Microsoft Management Console (MMC), double-click Security Zones and Content Ratings.
8. Under Security Zones, click to select the Import the current security zones settings check box, and then click the Modify Settings button.
9. Under the Select a Web content zone to specify its security settings section, click My Computer, and then click Custom Level in the Security level for this zone section.
10. In the Security Settings section, scroll down to the Downloads section and change the option from Enabled to Disabled under File download.
11. Under the Miscellaneous section, under the Drag-and-drop or copy and paste files option, if the option is set to Enabled, change the option to Disabled.

Re: drag and drop prompting

I'd like to know the answer to this one as well, we have a user who has parkinson's disease and we have had problems with this happening more and more.

The only other option so far i've come across is to create a new registry entry to disable drag and drop.

Sam

We have had some issues with people dragging folder to places they shouldnt be. I was looking at the security zones under internet explorer and noticed a "drag and drop or copy and paste" setting that could be set to enable, disable, or prompt. I would like to set this to prompt for intranet zones but it does not work when I set it in XP. I have tried on 2000 machines and it does work. Does anyone know why this setting doesnt work in XP?

Thanks,

Earl
