The batch file does work, when it was run separately at 2 am,3 am,4 am,5 am,6 am, we could see 5 separate tasks running (in the foreground). Now that we changed the scheduler to start it at 2 am and to run it every hour for 5hr 59m, i only see one entry in the text file created by the echo command and that's for 2:00 am. When I sent you a copy of the batch file i might have screwed up the syntax, but the batch file does run. I will try test using your latest suggestion and see what happens.

Thanks...

There are some problems with your batch file.

1. The very first line is wrong. Instead of reading
@echo offrem SCT Payment Client Startup for Banner Webrem AUDIT TRAIL:
it should read:
@echo off
rem SCT Payment Client Startup for Banner Webrem AUDIT TRAIL:

2. The lines
set
classpath=C:\j2sdk1.4.2_04\jre\lib\security\US_export_policy.jar;%classpath%
make no sense. It should probably be one single line:
set
classpath=C:\j2sdk1.4.2_04\jre\lib\security\US_export_policy.jar;%classpath%

3. The lines
java -Djava.protocol.handler.pkgs=com.sun.net.ssl.internal.www.protocol
com/sctcorp/ges/cc/SCTPaymentClient
must be joined in your batch file. I cannot tell if they are because my
newsreader wraps them. Make sure that "com/" is on the same line
as "protocol".

To find out what trips up your batch file, modify it like so:
@echo off

Re: task scheduler

```
rem SCT Payment Client Startup for Banner Webrem AUDIT TRAIL:  
echo %date% %time% >>c:\payment_client_is_running.txt  
goto :eof  
{Leave the other lines here}
```

Run it, see if it works, then move the line "goto :eof" a few lines further down. Eventually the batch file will fail and you will know the culprit.
