I have an application that is only accessible by the user of the account it was installed under.

is there a way to force the application to be accessible by all users?

I have already contacted the vendor but their support is very slow.

Is there any particular reason you've ignored the responses you received the first couple times you posted this very same question? Mindlessly repeating the question over and over again won't change the correct answers you've already received.

Not if that program's developers didn't design it to properly recognize multi-user operating systems.

You may experience some problems if the software was designed for Win9x/Me, or if it was intended for WinNT/2K/XP, but was improperly designed. Quite simply, the application doesn't "know" how to handle individual user profiles with differing security permissions levels, or the application is designed to make changes to "off-limits" sections of the Windows registry or protected Windows system folders.

For example, saved data are often stored in a sub-folder under the application's folder within C:\Program Files – a place where no inexperienced or limited user should ever have write permissions. (Games are particularly likely to follow this horrible practice.)

It may even be that the software requires "write" access to parts of the registry or protected systems folders/files that are not normally accessible to regular users. (This *won't* occur if the application is properly written.) If this does prove to be the case, however, you're often left with three options: Either grant the necessary users appropriate higher access privileges (either as Power Users or local administrators), explicitly grant normal users elevated privileges to the affected folders and/or part(s) of the registry, or replace the application with one that was properly designed specifically for WinNT/2K/XP.

Some Programs Do Not Work If You Log On from Limited Account
<http://support.microsoft.com/default.aspx?scid=kb:EN-US;q307091>

Additionally, here are a couple of tips suggested, in a reply to a different post, by MS-MVP Kent W. England:

Re: Installing for all users

"If your game or application works with admin accounts, but not with limited accounts, you can fix it to allow limited users to access the program files folder with "change" capability rather than "read" which is the default.

```
C:\>caccls "Program Files\appfolder" /e /t /p users:c
```

where "appfolder" is the folder where the application is installed.

If you wish to undo these changes, then run

```
C:\>caccls "Program Files\appfolder" /e /t /p users:r
```

If you still have a problem with running the program or saving settings on limited accounts, you may need to change permissions on the registry keys. Run regedit.exe and go to HKLM\Software\vendor\app, where "vendor\app" is the key that the software vendor used for your specific program. Change the permissions on this key to allow Users full control."
