Search in the registry for "iFirstDayofWeek" entry that changes when you switch languages.

Kevin wrote:

I need to figure out how to change the Windows System Clock (when clicked on to display the calander) to start the week on Monday instead of Sunday. I know if I change the regional settings to, say, Germany, it starts with Montag but that puts it in German and screws up all of the currency settings ,etc. I only want to change it so the week runs Monday – Sunday.....

Thanks!
