Hi Malke, I tried following suggestions for the display options but when I went into customize desktop, then web, I didn't see any checkmarks...by default. Both My Current Home Page nor Lock desktop items had checks next to them. Please advise. Oh, also I did add this group to my subscribed newsgroups thru Outlook but the max amount I could D/L was 1000 and that doesn't seem to be enough b/c I can't see my own post or many others. Doesn't seem to make sense to use Outlook for these postings if I can't see my own postings as well. But thank u!

Just download more headers. Go back to Tools.
