

Re: Error Message–Programs Leave Window I am Working In–Super Slow

I have also done the "Disk Scan" for any errors.

I keep my "Spam Settings" on high.

Can anyone please advise me what I am missing or help me in anyway – this is really frustrating. I have had to use my mouse to click back on this message about 20 times just to get this typed.

Thank you in advance to any assistance. It is greatly appreciated.

Go to Control Panel | Add or Remove Programs and uninstall Motive SmartBridge. It was probably installed with your ISP's software and you don't need it.
