Hi Marcus,

Take a look at the following article:

How to enable and use the "Run As" command when running programs in Windows

<http://support.microsoft.com/kb/294676>

Regards,

Anton Pegan

I have made this application that is automatically launched when a user logs into Windows.

I would like the application to start as user administrator or system, even when a non-privileged (limited) user logs in.

I want to do this so that a non-privileged user can not kill the process of my application in task manager – process tab.

Is there any way to do this?
