Hi, I have been trying to put on my computer Print Shop Deluxe, but everytime this is what happens: Application Error
PSDELUXE caused a General Protection Fault in
module user.EXE at 0001:67AC
I don't understand what application is missing and how do I get it back?
Thankyou

Right Click "My Computer", Properties, Advanced, Performance settings,
Data Execution Prevention tab. Select exempt

See if Psdeluxe is listed, if so select it (exempting it).
