Thanks Wesley, better solution.

Do it often enough and you won't have to think about it.

Tip. The keyboard shortcuts are UNDERLINED in all of the menus, unless...
"Hide underlined letters for keyboard navigation until I press the Alt key"
is selected.

Display Underlined letters for keyboard navigation...

Right click the Desktop | Properties |
Appearance tab | Effects button |
UNCheck: Hide underlined letters for keyboard navigation until I press the
Alt key | Click OK | Click Apply | Click OK

[[Specifies whether to suppress the drawing of keyboard shortcuts (the underlined characters in menus and controls) and input focus indicators (the dotted rectangles around objects), until you actually start using the keyboard to navigate in Windows, generally with the ALT, TAB, or arrow keys.]]

Re: font Size

This works in OE6.

Alt + V to open the View Menu

E to expand Text Size

G for Largest

L for Larger

M for Medium

S for Smaller

A for Smallest

So for Largest: Alt + V then E then L.

For IE6...

Alt + V to open the View Menu

X to expand Text Size

G for Largest

L for Larger

M for medium

S for Smaller

A for Smallest

So for Largest: Alt + X then E then L.

SD <SD@xxxxxxxxxxxx> hunted and pecked:

Could it be because I am using IE7.

I remember using a combination whether it was the posted combination or not I am not sure, but the combination I used did work.

Re: font Size

Depends
upon
the
application.
Using
a
Gecko
browser/mail
client
here
(SeaMonkey),
I
am
able
to
do
that
by
holding
down
<control>
while
rotating
the
mouse
wheel.
Works
for
WEBSites
and
mail/news.

I am using the built-in
Feeds reader in Opera 9.02
for reading posts
in
this group. messages,
Rotating the wheel while
holding down Ctrl works
in this browser.

At the same time, I wonder
why it did not not work for
you in OE.
