Hi,

I'd like to be able to connect to a PC on our network either via Remote Desktop, Remote Assistance, or any way possible (both PCs running XP Pro). I'd like to perform this without any intervention from the PC that I'd like to connect to. Of note, no one will be using this PC and there is no monitor, it is used solely for running reports from a program that we use. Also, no one will be able to, for example, accept a Remote Assistance invitation and I'm not sure if Remote Desktop is possible with XP machines. So, my question is; would I be able to connect to this PC with the above constraints and if so, how would I go about doing so?

Thanks.

No problem at all:

- Enable Remote Desktop on the host machine.
- Allow your account to use Remote Desktop on the host machine.
