Do you have connected in same time other usb devices?

"its_my_dime" wrote:

(Windows XP home. SP 2. USB Microsoft optical mouse)

About once an hour, my mouse freezes. I need to unplug it from the USB port and put it back in and it works again.

I tried uninstalling the driver and letting it reinstall but that didn't change the situation.

Also, I've tried a different mouse and different ports and that makes no difference.

Thoughts?

Thank you.

Other USB devices:

Zip drive connected. Also HP Printer and Scanner.

Nothing new here. The mouse worked with them for a long time with no problem.
