Check the firewall to see if the FTP software is premitted to access the Internet. Some firewall need to have the IP ports 20-21 opened.

Did you ever get a solution to this? If so can you share it... I'm having the same issue now.

Thxs. HP

Cannot ftp to any site from my desktop computer, whether using Win_FTP, SmartFTP or Firefox. I'm using a Dell Desktop, Windows XP connected to a cable modem by hard wire through a Linksys router. Yet another desktop and notebook, both Windows XP, connecting wirelessly using the same FTP clients can connect.
