Hello,

I am running windows XP – Service Pack 2. I just rebuilt my machine. I have an OrangeMicro (NEC Chipset) 4 + 1 port USB 2.0 PCI card. However, my machine doesn't recognize it as a USB 2.0 card. I can't get the drivers from OrangeMicro as they went out of business a while ago.

After doing some research, I found that Windows XP with SP2 should natively support a PCI USB 2.0 card. I can't get it to work....

I also searched driverguide.com and none of the drivers i tried worked.

Any ideas or help would be greatly appreciated...

Try it in another machine, if it still doesn't work then throw it away. There is likely a good reason they went out of business. It's unfortunate to add to the pile of waste but a new card is very cheap so how long can you spend on it?

Michael
