this is a problem that just developed yesterday so no AVG wouldnt necessarily have the fix for it up yet. I got the info from the link which i put in my first post, check that out to answer your questions

"Sandy" wrote:

John, if in fact this came in through AVG. wouldn't they have something on their website? So far they don't.
I copied your instructions. I am to rename the 2 files AVGCLEAN.SYS to AVGCLEAN.SY_ AND AVGRSXP.SYS TO AVGRSXP.SY_. It says to launch registry editor (regedit.exe) does this launch from safe mode? or?

Solutions for fixing Flooder.ake

Solution #1:

1. Boot your computer to Safe mode. Power on (or restart) your computer, keep pressing F8 key until the Startup menu appears and choose "Windows in Safe Mode".
2. Uninstall AVG through the control panel "Add or Remove Programs" applet.
3. Reboot.

Solution #2:

1. Boot your computer to Safe mode. Power on (or restart) your computer, keep pressing F8 key until the Startup menu appears and choose "Windows in

RE: Virus or Trojan

Safe Mode".

2. In the Windows Safe mode, navigate to following folder:

C:\WINDOWS\system32\drivers\

3. Rename rename the following files to avoid furhter deleting of "winlogon.exe".

AVGCLEAN.SYS -> AVGCLEAN.SY_
AVGRSXP.SYS -> AVGRSXP.SY_

4. Launch Registry Editor (regedit.exe) and remove the "__delete" value in the right pane from this key:

HKEY_LOCAL_MACHINE\SYSTEM\CurrentControlSet\Services\AvgClean

5. Restart the computer back to Windows normal mode

6. Update your AVG program to latest virus base version. Launch AVG or open AVG Control Center and press F9 key to update your AVG.

7. Then rename the SYS files back to their original names

AVGCLEAN.SY_ -> AVGCLEAN.SYS
AVGRSXP.SY_ -> AVGRSXP.SYS

8. Restart your computer for to get AVG Resident shield loaded again

Solution #3:

If either of the above solutions do not work, you will have to reinstall your Windows operating system.
