Sorry not enough info before, running XP SP2 installed.

JVM build 3810 downloaded & installed, got error message 'No Java JVM could be found on your system, Please download aJRE from <http://java.com/getjava>' Hence downloaded and installed that but still getting same error message. The sun Java is not showing up in Internet Options, Advanced tab or in control panel.

I'm Confused to be honest with you, but here is the link for Offline Download/install for Java try to download and install offline and Reboot and see if the issue will resolve:

<http://www.java.com/en/download/manual.jsp>

Again is your computer clean from malwares and Virues?, scan for them. Try to run this command to repair any damaged files/folders may on your system:

Open Run command and type:

sfc /scannow click [ok] and if it asked you about the XP Cd hand it in o let it repair the damaged/corrupted files/folders found.

What website is that asking or giving you this Error message?.

HTH.

Regards,

nass

That link goes to the previous version of java, Version 5 update 9. The most recent is update 10 should be used and is available from here:

<http://java.sun.com/javase/downloads/index.jsp>

Why Sun has an older version on that one link I don't know.
