Here are the results of the error report for Event Id 7026:

The following boot-start or system-start driver(s) failed to load:

AFD  
AmdK7  
fips  
hwinterface  
IPSec  
MRxSmb  
NetBIOS  
NetBT  
RasAcd  
Rdbss  
Tcpip  
vsdatant

Once again thanks for your help...Any new ideas?

EJ

I have a thought about Network services and drivers. If you boot in Safe Mode an Error Report like so is produced. Note the Event ID is 7026 as this detail will help you find your own Report n the System log in Event Viewer.

Event Type: Error  
Event Source: Service Control Manager  
Event Category: None  
Event ID: 7026  
Date: 07/01/2007  
Time: 13:20:20

## Re: Boot Problems

User: N/A

Computer: GERALD-SKQPK3W8

Description:

The following boot-start or system-start driver(s) failed to load:

AFD

Avg7Core

Avg7RsW

Avg7RsXP

BANText

Fips

intelppm

IPSec

MRxSmb

NetBIOS

NetBT

RasAcid

Rdbss

Tcpip

As starting Safe Mode with Networking Support requires additional drivers then one or more of these drivers will be required so it is possible that it is one of the listed drivers that is causing your problem. Post a copy of the corresponding report generated on your machine when you boot in Safe Mode ( not Safe Mode with Networking Support ). It is unlikely that the corresponding Report will not be generated if you try to boot in Safe Mode with Networking Support because the Stop Error will prevent the further creation of Error Reports.

Hope this helps.
