you zapped something with  
a static charge.

That seems to be the best hypothesis. I asked my local computer guy and he came up with the same suggestion. I'm in FL but it's been unseasonably cold and dry here. I guess I just don't know enough about the system to be able to understand why the OS got blitzed with my tinkering. Need to read up on it.

Thanks. I'll review the referenced article on memory.

Jack
