Whenever I close Windows down, I get a window McLspAsyncWindow that I have to click End Now so that windows will close. This has only happened during the last month or so. Sometimes I have to click End Now several times. I have been in touch with McAfee, but they know nothing about this message. Does anybody know what this is associated with and how I stop it.

Hi it's probably because you've installed a toolbar; in my case it was Yahoo! toolbar, but other software such as Nero or Google may install toolbars, sometimes when you don't even realise it. McAfee doesn't work well with toolbars. I uninstalled Yahoo! toolbar and now I get clean closedowns. Hope this helps!
