Malka, thanks for the answer. Please address my query..

I have deleted my PST (~400 MB) mistakenly and then OutLokk created empty PST (270 KB) at the same place by same name, then only I come to know about the deletion.

I have tried GetdataBack and couple of softwares, but these are not even able to locate those deleted PST files, other deleted files I am able to recover which I dont need.

Please suggest the way to recover as those PSTs have lot of business data.

Yesterday I accidentally deleted pages of mail from an Outlook profile.

Looking for a solution, I finally followed instructions in Microsoft Knowledge Base article 256986, creating a new registry file which supposedly would enable a Deleted Item Recovery function on the Tools menu in Outlook.

It didn't.

I then tried System Restore, 3 times with 3 different restore points, each time receiving the message 'Your System Could Not Be Restored To This Point'. I haven't gone to look up how to check if System Restore is off, since my understanding is that turning it on couldn't give me an earlier restore point anyway.

Can anyone advise as to where and how I could find the deleted pst info before it disappears forever?

Re: Outlook 2002 How to Retrieve Hard Deleted Items?

I've been using this computer hardly at all since the deletion incident to minimize data buildup and skipped the daily backup last night also. My OS is XP pro.

If you haven't overwritten the .pst file with any other .pst file, then probably you can get it back with data recovery software. Here are some links to various programs. I use Easy Recovery Pro, but it is expensive. People whom I respect have recommended R-Studio and Restoration. YMMV. If you use data recovery software, install it on another machine and either use it from that operating system or create a bootable cd/floppy and work with that.

R-Studio – <http://www.r-tt.com/>
Ontrack's EasyRecovery – <http://www.ontrack.com/software/>

The alternative is to send the drive to a professional data recovery company like Drive Savers (my preference) or Seagate Data Recovery. General prices run from \$500USD on up. Drive Savers recovered all the data on a failed laptop drive for one of my clients and it cost \$2,700. He thought it was worth the money; only you know what your data is worth. Some insurance companies will cover data recovery expenses under "Loss of Intellectual Property".

Drive Savers – <http://www.drivesavers.com>
Seagate Data Recovery Services – <https://www.seagatedatarecovery.com/>

If you don't have the skill and/or equipment to do the software procedures and the data is crucial, take the machine to a professional computer repair shop that has experience in doing data recovery. This will not be your local version of BigStoreUSA. In-shop data recovery is usually not exactly cheap (for ex., my charges are generally \$150–350USD), but it normally costs less than sending the drive to a company like Drive Savers. You need to make the determination of the value of your data and decide what to do.
