I am a little confused about the monitored drive. The CDROM drive is the D drive. Can there exist a monitor D: partition? Are drive letters and partition letters different? In other words can a same letter exist for both?

Hi Susan,

Is the D:\ partition being monitored by System Restore?

How to disable a monitored drive:

Restore Point Problem

Infected restore point cannot be cleared using the reset and re–enable System Restore

However based on the results it appears that the file is located on a CDROM (CDFS) and not on the C fixed disk.

Freedom lists the virus as D:\SYSTEM VOLUME INFORMATION_RESTORE{46DE8921–1D39–44D2–A9E9–64119261F211}\FIFOED\A0009633 but I cannot find this anywhere and when I scan my computer with Freedom it does not find it after this initial startup alert. Please help!

Re: Infected Restore file– get rid of it how?

n System
Information

Microsoft Windows XP Professional (build 2600) SP 2.0
Architecture: X86; Language: English

CPU 0: Intel(R) Pentium(R) M processor 1.60GHz
Percentage of Memory in Use: 54%
Physical Memory (total/avail): 1023.37 MiB / 463.21 MiB
Pagefile Memory (total/avail): 2460.63 MiB / 1868.36 MiB
Virtual Memory (total/avail): 2047.88 MiB / 1995.05 MiB

C: is Fixed (NTFS) – 52.05 GiB total, 5.25 GiB free.
D: is CDROM (CDFS)
E: is Removable (No Media)

How should it be properly deleted?

TIA,

Susan
