| Post here trying to get some leads as how can I get rid of the above trojan.
| Using xp prof and I ran Norton but it did not find anything (either in safe
| mode or normalmode with latest definition). I ran housecall but it does not
| seems to be unable to fix it (either in safe mode or normal mode). I also
| use Sophos SAV32CLI to clean it but to no avail.

|
| Its located at c:\windows\system32\xkrdk.dll. Can I just delete "xkrdk.dll"
| file? I noticed that I cannot turn of the screen saver. It will always goes
| back to the default setting at 10 min (after "apply" it)..... any other
| options other than clean installation, thanks

If it was just easily deleted then the Sophos 32bit Command Line Scanner (SAV32CLI) would have done so.

Download, extract and run Pocket KillBox
<http://www.bleepingcomputer.com/files/spyware/KillBox.zip>

Reboot the PC into Safe Mode and then perform a full scan in Safe Mode using the Sophos 32bit Command Line Scanner.
