Ever heard of Google?

I searched for "pc sharing" and got this:<http://sewelldirect.com/multiuserworkstation.asp>

I am looking for information if it is possible to make one computer with two monitors as two separate computers? Meaning that if I have two monitors, 2 keyboards.... I could login to one machine at the same time. How do I go about it? I don't really care about performance. Will I need hardware... ?

thanks.
