Click Start > Run, type in: control userpasswords2 and press Enter.
Make sure the "Users must enter a username and password to use this computer" check box is selected.

I am the administrator on the computer and have set a pass word to allow the windows to boot all the way. The problem is that it worked at first but now the log in window does not appear and boots all the way. I need to password protect so my computer so my young daughter does not stay on the computer all day long. I want to monitor her time when I'm here. I can't if the computer allows her to sign on and I'm at work. Please help me stop her unauthorized computer usage
Thanks in advance
