why would my network diagnostic tests be failing. default outlook
express mail and default outlook express news fails also network
adaptors fails as well.

I am on a dial up system and can get onto the net and get my mail.
If i exit my trend PC Cillin 2007 internet security the mail and news
pass but the network adaptor still fails. I have also had a few
freeze ups in Hotmail and quite often get the message to test my
network in Internet express. It is costing me connection calls each
time I have to dial up again to get back on the net. thanks

Gosh... I hope it isn't do to the old telephone lines used in your town and/or the old dialup equipment your ISP
is probably leasing. One way to test this idea is to call another dialup number far away like a few states away.
Yes it will be long distance, but you should see if the problem disappears quick enough.
