Hello,

My laptop (P3, 500Mhz) had an external CD ROM drive which I lost.

I did the following to install XP:

I moved the HD from this Laptop, inserted it to another Laptop, installed XP on it and then put it back.

When I turned on the laptop it will not boot only gives choices between "Save Mode" etc. and whatever I chose it went back to that screen.

How can I install XP without a CD ROM?

Thanks,

AJS
