Hello,

My laptop (P3, 500Mhz) had an external CD ROM drive which I lost.

I did the following to install XP:

I moved the HD from this Laptop, inserted it to another Laptop, installed XP on it and then put it back.

When I turned on the laptop it will not boot only gives choices between "Save Mode" etc. and whatever I chose it went back to that screen.

How can I install XP without a CD ROM?

Thanks,
AJS

I would create a 'network' with another computer, share the CDROM on that computer, and install it from the OTHER cdrom...
