Yes, I hadn't selected "DAVID" and that was the problem. Thank you for that, it is now working SANS startup screen. Excellent, thanks for your patience and help.

Ok, I see what you are saying – how come when I boot, it is logging in under a GUEST or someone else, rather than the ADMIN user name (which will give me admin status)? Is there a way to change this when it boots, that is logs in auto under ADMIN rather than anyone else?

It sounds like you are not logging in as your user name. If you installed programs under the Administrator account, some programs do not put shortcuts into the "All Users" profile, but only into the profile the program was installed under, so you may not see them when you log in under your user name. Usually you can move the shortcuts into the All Users profile so they are accessible by any profile.

Open User Accounts again (control userpasswords2), click the Advanced tab, under "Advanced user management" click the Advanced

Re: How do I get rid of startup screen of User names? SP2 seems to ha

button, click
the Users folder and right click on your user name and select
Properties. Check the "Member of" tab to see that your
account has Admin
rights.

In an Admin account, turn the Welcome screen back on (or using
Ctrl–Alt–Del). Log in as the account you want to always use. Go back
into User Accounts and uncheck the option again. Restart and it should
log in as the last login.
