I have just downloaded nbackup utility tried to save data on a CD recordable and a CD rewritable and I choose location of drive ie D: and the backup file name ie backup. Get error of backup file cannot be used 'please ensure it is a valid path and i have sufficient access' as far as I am aware I do have the sufficient access, so what do I need to do or am I doing something totally wrong

You cannot backup directly to a CD using NTBackup unless it is a CDRW that has been formatted for packet writing. The built-in Windows XP CD burning function will not do this – you need a third-party applicaion such as Nero. Backup to your HDD and burn to a CD afterwards....
