And gals?

Eh. I'm a woman, but would much rather be a "guy" in slang – "gal" sounds dated, and somehow a bit condescending. Perhaps that's just me.

Guys!

Today I
found a
BUG in
Notepad, I
have
checked it
in XP as
well
as in Vista
and its
working in
both of
them.

Open
Notepad
and enable
"Status Bar"
from "View
-> Status
Bar".
If this
option is
disabled,
then first
uncheck
"Format ->
Word

Re: Interesting Notepad BUG

Wrap"
option and
now enable
Status Bar
again.

Now open
any existing
text file
(Yeah, you
hv to open
an already
saved file to
check this
BUG) and
put your
cursor to
any line,
you'll see its
location in
Status Bar.

e.g. we
assume that
you put the
cursor at
column 3 of
Line 3,
then it'll
show "Ln 3,
Col 3" in
Status Bar.

OK, fine
then whats
the BUG?
Now press
<Ctrl>+S or
Choose
"File
-> Save"
and look at
the Status
Bar.
VOILLA,
it'll show
"Ln 1,
Col 1"
irrespective
of the actual
Line and

Re: Interesting Notepad BUG

column
Number,
that
was "Ln 3,
Col 3" in
our case.
<http://img245.imageshack.us/img245/1964/notepadbugaj3.jpg>

Sometimes
you may hv
to press
<Ctrl>+S
twice to
re-create
this
BUG. So
the BUG is
whenever
you save an
existing
file,
Notepad
will
show "Ln 1,
Col 1" in
Status Bar
and it'll be
corrected
when
you'll move
the cursor.
Regards,
Vishal
Gupta
