Hi any one who can help.

I am running Mozilla Thunderbird as my e-mail program. All was fine but suddenly, and I don't know when, when I click a link to an internet site within the e-mail nothing happens. I have the same problem in outlook express no links work.

My firewall program is Zone Alarm Security Suit, I have checked the settings and all seem fine. I am also running Advanced Windows Care.

Can any one help please as it is driving me to distraction.

open a run command and type in:

regsvr32 urlmon.dll click [OK]

regsvr32 oleaut32.dll click [OK]

Reboot your machine and try the links, does this help.–

Hi nass

Thanks for your reply but unfortunately it hasn't worked. Any other ideas?–

Repost:

Are you running IE7?

Is IE7 set as your default browser in Set Program Access and Defaults?–

Hi Robear

IE7 is not set as my default browser as I am using Firefox. The problem is now solved as I found the answer to the problem on the Thunderbird Help site. Thanks for your response.–

Care to share the resolution with the rest of us?

Hi Robear,

The solution was to force Thunderbird to go to the default browser which in my case is Firefox. I typed the following in Start/Run:  
firefox.exe –silent –nosplash –setDefaultBrowser and then clicked ok.
