Are you sure the cable modem is getting internet? Tried hooking directly to it?

Hello,

No Internet Dilemma!

Ive been trying to help my friend out for the last couple of nights with his new home networking setup. All he wants is to connect to the internet via his laptop over wireless while having his home desktop PC hooked up to the cable modem.

So we have the basic bog standard setup (or so id think)

Internet --- MOTOROLA SB4200 SURFboard cable modem ---
AzureWave 54g
Wireless 4-Port Cable Router

Re: No Internet Connection Between Router and Modem

<http://www.maplin.co.uk/Module.aspx?ModuleNo=218646&C=Maplin&U=Search...>

So After hours of troubleshooting at getting idiotic Windows Vistas due to its unreliability we finally realised that the router wasnt picking up an internet connection from it cable modem.

Im all out of ideas now and thought id try my luck with this forums...

Hope to hear from you all soon

Thanks, Dan

Hehe

Im 100% sure of this, plugged the USB into the laptop to double check it was working correctly

.
