Delete the X's. You're reading far too much into the post.

I know sufficient to know you Disable and not DELETE if you are using
msconfig as a diagnostic tool!

Good grief how is it in any way destructive by simply blocking the  
loading of programs? Your diagnostic procedures obviously vary from  
mine but to say mine are destructive leaves me with the impression  
you don't know much about XP.

Hardly diagnostic when you say "Delete all items in startup."  
Far  
simpler to run Disk Defragmenter in Safe Mode to achieve  
the same  
objective and not be so destructive. In any event there are far  
better ways to disable items in Start if you need to.

This is a diagnostic technique. There is absolutely nothing wrong with it. Would you care to post your concerns?

Not good advice. Rather like chopping off your hand to remove a splinter in your finger.

Unknown wrote:

Try using
msconfig.
Delete all
items in
startup.
Reboot and
run
defrag. This
will have
the effect of
not loading

Re: my defragmenter is broken

any
program
which
can
interrupt
defrag.
While
defrag is
running or
before
starting
you may
want to use
task
manager to
see what
may be
happening.

Is
your
hard
disk
formatted
as
FAT32
or
NTFS.
Select
Start,
Control
Panel,
Administrative
Tools,
Computer
Management,
Disk
Management

Re: my defragmenter is broken

to
find
out.

If
NTFS
select,
Start,
Run,
type
"cmd"
without
quotes
and
hit
Enter,
type
"Chkdsk
/f
/r"
without
quotes
and
hit
Enter.
Answer
Y
to
the
question
which
appears
and
exit..
You
must
restart
the
system
before
the
disk
scan
begins.

I
have
run

Re: my defragmenter is broken

Re: my defragmenter is broken

scan
disk
on
restart
already.
It's
disk
defragmenter
that
doesn't
work.
See
first
post.
