Probably after an update my computer doesn't recognize the mixing device anymore.

There is no sound anymore.

The soundcard is alright, de drivers are new. The connection with the speakers is good etc.

In Sound and Audio Devices in the Control Panel there is no audio device everything is greyed out.

In the System Devices section of the Control Panel the soundcard is recognized and works properly.

The problem is not mentioned in the Knowledgebase of Microsoft but I found someone with the same problem on the internet.

He asked help on the internet and someone said the problem is the Windows Audio Service. (Windows Audio Properties) Usually it starts automatically but now it is stopped. It should be activated again.

It was true, the service was stopped. A restart failed and then I saw there was an error in the path to the executable.

It should be %SystemRoot%\System32\svchost.exe -k netsvcs

In my case it is %SystemRoot%\System32\svchost.exe -k netsvcs

I tried to replace the c for an s but that was not possible. Someone on the net told that it could be changed in the register in windows

When I studied the register I saw that the path in the register was alright!

HKEY-LOCAL_MACHINE\SYSTEM\CurrentControlSet\Services\wscsvc
Image Path = %SystemRoot%\System32\svchost.exe -k netsvcs

Summarized the path in the register is oke but the path in the Windows Audio Properties (Local Computer) is corrupted.

What can I do?

Thanks in advance
