After the clean install you installed motherboard chipset & other drivers from the supplied cd's or manufacturers sites?
Your PC supplier if large OEM, eg Dell/Hp or a laptop, otherwise the actual hardware manu.sites

Reinstalled o/s?
Why & was this a repair or clean installation?

I have Windows XPSP2. My computer came with a CD–RW drive. I upgraded the same to a DVD–RW drive. For a few days, it was working fine. I then reinstalled my OS and then, whenever I put in a DVD–RW disc, I get the blue screen of death and on the other hand, if I put in a CD–R or a DVD–R disc,
I get the following error message: ****D:\ is inaccessible. A parameter is incorrect.**** I had installed InCD and Nero, I removed both of them, still

Re: Problem with DVD drive

same results. Please help!
