Hi,

I need a simple straight forward way back no advice to go there or read that.

Plz help me in simple terms.

Thanx,

Oc9ine.

Hi,

I have winxp sp2 with NTFS on all my drive's volumes. [Microsoft Windows XP [Version 5.1.2600] I used my Administrator account to make read only and Encrypt a folder containing sub folders with different files in them. I made read only and Encrypted Super folder or outer most folder of that folder tree. But when I after some days reversed that thing I mean I made root folder of that folder tree [Read only – Off] [Encryption – Off] . But it does not work I mean files in sub folders are not opening, they are just locked.

I want to know how can I reset the settings on my read only and Encrypted folders to normal so that everyone can access those files.

Plz help me in this regard.

Thanking you in positive anticipation.

Oc9ine.
