I tried all I could to set a default browser (from within Firefox, from Control panels), and most recently I did:
firefox.exe -silent -nosplash -setDefaultBrowser
following hints from a netter, and set
"Control Panel > Add/Remove Programs > Set Program Access and Defaults

custom.."

Now whenever I click a hyperlink from within Eudora, after a LONG pause (>15 seconds), a "die-hard" prompt comes out:

SERVER BUSY

This action cannot be completed because the other programs is busy. Choose "Switch to" to activate the busy program and correct the problem.

[Switch to] [Retry]

-- the only thing I could click is "[switch to]" which leads to "Control Panel > Add/Remove Programs > Set Program Access and Defaults", and I have to **change** the "Default Program" in the control panel before the above prompt could kindly go away. Any solution?
