Your plan ignores the fact much spam and malware are spread using compromised computers.

If you are not concerned if your computer gets malware, it is more likely soon compromised possibly before you have any clue there is a problem.

Those who spread malware like computers such as yours.

Those receiving the spam and malware dislike them for the inconvenience they cause.

Thanks for the info and I'm sorry I don't read all the posts . PA Bear

why you ask ? Simple, I don't use the computer for anything  
but

surf the web , Its not use for any type of work . I don't like using  
all those anti -blah softwares ( ad aware , spybot , anti-virus or  
firewall ) why ? I don't care if my computer gets infected , Once I  
believe it has been ? I reinstall ...

BTW I don't send emails out , I just open them
