You can use FAST selectively (i.e., to only save/transfer certain data).

Using WinXP's FAST Wizard, by MVP Gary Woodruff

(Please read the caveats about Outlook Express)

I have a couple of computers I need to replace & am on kind of a short time frame.

Normally, I would run the file & settings transfer wizard, save to an external drive & import file on the new computer.

I have noticed that this can take an extremely long time, sometimes.

What can I do (pick & choose files? delete files before running wizard on old computer?) to speed this process up?

Thanks!
