Aaron Oxford wrote:

Where are the error codes for this ridiculous farce of a software package? Can someone honestly reserve an error code at MS without providing details of what the message is?

<http://support.microsoft.com/gp/errorflow> doesn't work

Telephone assistance offered to charge \$80 to look it up

My operating system isn't listed at
<http://support.microsoft.com/gp/hublist>

And of course to get this far (ie nowhere) I had to have LiveID.

Well, what operating system ARE you using? Win95, Win3.1, DOS 6, Linux? OSX? Unix?

Everybody may as well just pirate MS software – they don't give a crap whether you've given them cash or not, just don't ask for help EVER.

Google "1000000A" yields 15,100 hits. And Google doesn't charge.
