I just did run chkdsk. Thanks for the idea but I'm still having problems.

I found one of the offending files (there are a bunch). I'm getting error messages as "Cannot delete symicnet.dll: The file or directory is corrupted and unreadable".

I really don't understand what the problem could be. I'm using Administrator privileges.

I'd appreciate other ideas. Thank you.

Mike

Hello,

Did you run chkdsk as "CHKDSK D: /F"

I ran chkdsk and it's doing the same things.

Thanks for the idea and any other thoughts will be welcome.

Mike

Have you run chkdsk on the drive to check disk corruption

"speedy_mike" wrote:

A while back, I needed to restore some lost files and had to restore the entire image backup of my C: drive to an external drive. I'm through with that large file and want to delete it from the external drive. However, I keep getting error messages for some of the files that say "Cannot delete
xxxxxx: The file or directory is corrupted and unreadable."

For example, one case is in
M:\Drive(C)\downloads\Intel Drivers\xxxxxx.

I'm running XP Pro with all current upgrades.

Thanks in advance,

Mike
