Added a router between comcast and mobo nic so I am now a "LAN" heehee.  
Just me, not sharing. But now logon has changed from a blank welcome screen that automatically porogresses to my desktop, to a single icon that I have to click and then it goes right in to desktop. Looked at Users and connection properties, but nothing obvious.

one computer

one user

Wired router's only purpose is as firewall.

Linksys WRT54G – running as NON wireless.

How can I get it to autologon?

tia!!!

Here are two options.

1. Download and install TweakUI from Microsoft. TweakUI is available here.

Microsoft PowerToys for Windows XP

<http://www.microsoft.com/windowsxp/downloads/powertoys/xppowertoys.mspx>

Direct Download of TweakUI

<http://download.microsoft.com/download/f/c/a/fca6767b-9ed9-45a6-b352-839afb2a2679/TweakUiPowertoySetup.exe>

## Re: How autologon after adding router? tia

Once the program is installed, go to Start -> All Programs -> Powertoy for Windows XP -> TweakUI.  
Click the + sign next to Logon in the left hand column.  
Click on Autologon.  
In the right hand pane, put a check mark in the box next to "Logon automatically at system startup".  
Enter the name of your user account in the User Name box.  
Hit the Set Password button and enter your password twice.  
Note: You should skip this step if your account has a blank password.  
Click OK to close TweakUI.  
Restart your computer to see if you get the desired results.

2. Go to Start -> Run.

Copy and paste the following into the Open box:

```
control userpasswords2
```

Click OK.

In the "Users for this computer" box, click on the account you want to have logged on automatically.

Uncheck "Users must enter a user name and password to use this computer".

Click OK.

In the box that pops up, make sure the account you clicked on earlier is entered next to User Name.

Enter your password twice.

Note: You can leave the password box blank if the account does not have a password.

Click OK.

Reboot to see if you get the desired results.
