You have two threads on broadly the same subject.

- 1) Because the hd is new doesnt mean its not bad
- 2) Your version of winxp doesnt have big lba enabled
- 3) cyclic redundancy err means data is corrupt

But this harddrive is New... probably 3rd time ive used it so far... just installing xp on it now so there u go...

But not just that it doesnt show the full 320gig its got... only shows 100

"John John" wrote:

Your hard disk is probably kaput. Buy a new one.

If you want to use the disk you have now, go the the drive manufacturer's web site and get their zero write utility. The zero wipe utility is usually part of the diagnostic utilities. Zero write your drive and try to install Windows again. DO NOT EVER rely on the drive for your personal data storage, the drive may fail without additional warning at any given time.

Hi, ive been just trying to install xp on my newish Harddrive  
Once all the files copy from cd and computer starts up and  
around 36min  
left  
of installation i get this error  
An error has been encounered that prevents setup from  
continuing.

Re: XP Installation problem (Data error cyclic redundancy check)

One of the components that windows needs to continue setup  
could not be  
installed

\*\* Data error (Cyclic redundancy check)

Can you please help me out what to do with this problem as i  
have never  
came  
across it yet.
